

# NCR XL DISPLAY FAMILY

## UNCOMMON VALUE

Your stores reflect your brand image, and you want the checkout area to look inviting to your shoppers. The sleek ultra-thin XL displays offer the look you want and a price that fits your

budget. These displays feature a bright and sharp image to make them easy to read and to create an enjoyable experience for both your customers and associates.

### Tap, zoom, swipe, or scroll

The projected capacitive display supports 10-point multi-touch interactions, making it familiar and easy for your associates to use. Another advantage is projected capacitive displays do not require calibration to help you avoid unnecessary service calls. For environments requiring glove or stylus input, a 15" resistive touchscreen option is available to best meet your needs.

### Make the right choice

You know that the retail environment can be hard on your point-of-sale equipment. That's why our XL displays are designed specifically for demanding retail environments and are resistant to dust and liquid infiltration. The zero-bezel design of the projected capacitive displays makes it easy to clean. Software controlled on screen display (OSD) prevents tampering or accidental shutdown while maintaining a sleek appearance.

### Flexibility without compromise

The XL display family includes a 10" and a 15" and is available with a touchscreen or without one. They can be used on a display stand as part of our modular POS systems or rear mounted on our X-series integrated terminals to display pricing and promotional messages. All displays are available with an encrypted magnetic stripe reader (MSR) for enhanced security. Whichever option you prefer, these ultra-thin displays are sure to enhance the appearance of your wrap stand or checkout and maximize counter space.
